

Subjective or Soft skill Question Generation

Subjective or soft skill questions typically pertain to aspects of an individual's personal attributes, interpersonal skills, and behavioral tendencies rather than concrete technical knowledge. These questions aim to assess qualities such as communication skills, teamwork abilities, problem-solving approaches, adaptability, leadership potential, emotional intelligence, and other non-technical competencies.

Objective or Technical Questions Generation

Objective or technical questions are inquiries that typically have definitive, factual answers based on concrete knowledge, principles, or methodologies. These questions aim to assess a candidate's understanding and proficiency in specific technical domains or subjects. Objective questions are characterized by their clarity and the existence of correct or incorrect answers, which can often be determined through logic, analysis, or reference to established standards.

Behavioral Interview Questions

Behavioral interview questions aim to predict a candidate's future performance by looking at their past behavior. They can revolve around interpersonal matters, leadership attributes or how a person acts under pressure.

eg.

1. Could you tell me about a complex problem you solved at work? What was your approach to finding a solution?

2. How did you learn from a mistake you made?

Since these Questions are generic we can hard code them and their eval criteria
